SUPERVISOR REVIEW

Website color palette report

FGK BACK OFFICE SERVICES

Prepared for supervisor review | 21 October 2026

Executive assessment

The website uses aqua as its signature accent and deep teal for primary actions. White and warm light gray keep content areas light, while black anchors headings and navigation. The core palette is coherent; button hover states and text on aqua need more consistent contrast.

THE CURRENT COLOR FAMILY

Aqua	Deep teal	White	Warm gray	Black
#59C3C3	#296161	#FFFFFF	#F7F5F5	#000000

Swatches show the color set; their widths do not represent measured website coverage.

Keep

Aqua accents, pale panels and dark teal buttons form a clear, recognizable system. White labels on deep teal already have strong contrast.

Improve

Use dark text on aqua, preserve contrast during hover, and consolidate repeated colors into shared definitions.

Basis of review

Source-based review of the supplied FGK website project. Values come from stylesheets and component styles; this report is not a capture of the live deployment or a full accessibility audit. Color names are descriptive labels assigned for this report.

PALETTE SPECIFICATION

Colors & specifications

HEX and RGB values are taken from the implemented source. [1–5]

Aqua

#59C3C3

RGB 89, 195, 195

Brand accents, borders, icons and translucent panels. [2,3]

Deep teal

#296161

RGB 41, 97, 97

Primary button fill; paired with white labels. [1]

White

#FFFFFF

RGB 255, 255, 255

Button labels, dropdown surfaces and footer links. [1,2]

Warm light gray

#F7F5F5

RGB 247, 245, 245

Background for several home-page and service sections. [3]

Black

#000000

RGB 0, 0, 0

Headings, hero text, navigation and selected hover states. [2,3]

Dark charcoal

#333333

RGB 51, 51, 51

Dropdown menu text and modal close control. [2,5]

SUPPORTING COLORS

#F1F1F1	#DDDDDD	#CCCCCC	#449F9F	#4EA4A4
Panel neutral	Border neutral	Input border	Form hover	Careers hover
241, 241, 241	221, 221, 221	204, 204, 204	68, 159, 159	78, 164, 164

Declared but unused in the reviewed source

#505055 (charcoal), #F3EEED (body neutral) and #A31700 (red) are global declarations without component references. They are excluded from the active palette above. [1]

USAGE & READABILITY

How the colors work together

Illustrative samples below reproduce color pairings from the source; they are not website screenshots.

Primary action	Section accent	Aqua button
White / deep teal	**Black / aqua**	**White / aqua**
Strong contrast	Strong contrast	Needs adjustment

AQUA TRANSPARENCY

7%	22%	40%	66%	70%	90%
Form fill	Expertise card	Form panel	Desktop header	Mobile header	Footer overlay

Samples are composited over white. Actual appearance changes with the image or surface beneath. The 22% sample represents #59C3C338 (21.96% alpha). [2–4]

TEXT CONTRAST CHECK

Text / background	Ratio	AA text result
A White / #296161	**7.05:1**	Meets normal & large
A Black / #59C3C3	**10.02:1**	Meets normal & large
A White / #59C3C3	**2.10:1**	Below both thresholds
A White / #449F9F	**3.13:1**	Below normal text
A White / #4EA4A4	**2.93:1**	Below both thresholds

Interpretation

WCAG 2.2 AA requires at least 4.5:1 for normal text and 3:1 for large text (18 pt regular or 14 pt bold). Ratios above use solid sRGB colors, are rounded for display, and do not constitute a full-page conformance result. [6]

RECOMMENDATIONS & EVIDENCE

Recommended next steps

Preserve the current color direction and make these focused refinements.

1

Standardize readable action states

Keep #296161 with white labels for primary buttons. Replace the lighter Contact/Careers hover fills (#449F9F and #4EA4A4) with a sufficiently dark shared hover color; black is an existing high-contrast option. [1,5]

2

Improve text on aqua and the footer

Use black labels on aqua, or deep teal behind white labels. Apply this to the Human Resources grid button. For the footer, use dark text or a deep teal surface and verify the result over its image. [2,4]

3

Maintain a single palette definition

Create shared definitions for aqua, deep teal, text, surfaces, borders and hover states. Review unreferenced declarations and stale color rules so future updates use the same palette across pages and screen sizes. [1–5]

Evidence & review method

Reviewed global styles, shared components and page-level/scoped styles. Traced key classes to JSX to avoid reporting unused rules as visible colors. Contrast uses the WCAG relative-luminance formula. Source paths below are relative to src/app/.

[1] Global colors

globals.css:85–88, 113–114. CTA tokens and unreferenced legacy declarations.

[2] Navigation & footer

components/layoutcomponents/header/header.css:37, 55–62, 85, 125; footer/footer.css:23, 102, 130.

[3] Surfaces & form borders

components/pagecomponents/homepagecomps/styles/chooseussection.css:7; styles/homepagecontactsection.css:11, 41, 68; subcomps/homepagecontactleftsection.js:144, 176, 190–198.

[4] Cards & HR button

components/layoutcomponents/cards/expertisetransbackgroundcard/expertisetransbackgroundcard.css:4; components/subpagecomponenets/humres/styles/humresgridsection.css:48–50.

[5] Hover states

Contact/Careers subcomps: contactusform.js:185–194; applyform.js:273–290; styles/careersopeningssection.css:106, 128–136.
